Kinrix 1 through 6 years

at 6 months of age.

2016 Binational Immunization Resource Tool for Children from Birth Through 18 Years

Vaccine doses administered in Mexico may be counted as valid in the United States (including vaccines not licensed for use in the U.S.) if the dose or doses are documented in writing (including the date of administration) and comply with the minimum intervals and minimum ages as recommended by the Advisory Committee on Immunization Practices. See www.cdc.gov/vaccines/schedules/hcp/child-adolescent.html.

who are getting a flu vaccine for the

first time and then 1 dose per year.

Binational Tool Protocol CS263209-A

1. Determine what immunizations are needed for the child based on his or her age and the United States' Recommended Immunization Schedule (www.cdc.gov/vaccines/schedules/hcp/child-adolescent.html).

2. Review the child's Mexican immunization record, which is part of the National Health Card (Cartilla Nacional de Salud). There are two versions of the Health Cards. One is for children from birth through age 9, and the other is for 10 through 19. These are the official documents used throughout Mexico to record immunization and other health information. The vaccine records are located on pages 10-11 of the Health Cards for the children from birth through 9 years and on pages 7-8 for the pre-teens and teens (ages 10-19).

demographic information.

names, respectively.

ADICIONALES

ESQUEMA DE VACUNACIÓN

- 3. Match Mexican records with left side of guide (Mexico Doses Recommended by Age).
- Review any immunization records obtained in the United States.
- 5. Match the U.S. records with right side of guide (USA Doses Recommended by Age).
- 6. Check insets, as they contain important information about combination vaccines. For example, in Mexico, Pentavalente Acelular is a combination vaccine, which includes DTaP, IPV, and Hib.

the gray section: OTRAS VACUNAS (other vaccines)

- 7. If a given vaccination recommendation for particular vaccine preventable disease is fulfilled for EITHER side of the vaccination chart, the child/adolescent can be considered vaccinated against that disease.
- 8. Check for contraindications, provide Vaccine Information Statement (VIS), and discuss any questions with the parent. Then, administer any vaccinations that are due or need
- **9.** Document in official chart and patient's personal medical record any vaccinations that are given.
- 10. Encourage patient to obtain available medical records from all clinicians and healthcare providers in the future and continue to document vaccinations received. Patient should be encouraged to take these records to any subsequent healthcare visits.
